There are 73 split three-dimensional crystallographic groups in all, out of a total of 219 isomorphism types of three-dimensional crystallographic groups. We also provide a general splitting formula for the lower algebraic K-theory that is valid for all three-dimensional crystallographic groups.

This book is the volume of proceedings for that meeting.
Algebraic K-theory is essentially the study of homotopy
invariants arising from rings and their associated matrix
groups. More importantly perhaps, the subject has become
central to the study of the relationship between Topology,
Algebraic Geometry and Number Theory.

The K-theory of the title is described in terms of the K-
theory of finite subgroups, as generalized sheaf homology
of a quotient space.
