approximate identity, which is bounded by 1 in an equivalent algebra norm. 1. INTRODUCTION The original form of Cohen's factorization theorem states that if x is an element of a Banach algebra A with a bounded approximate identity, then there is an element a in A such that $x \in aA$ (see [3, 5, 16]).

Bounded approximate identities, factorization, and a ...

Let A be a separable Banach algebra. Then A has a bounded approximate identity bounded by 1 if and only if there is a homomorphism θ from $L(W)$ into A such that $\|\theta(z, 1(\mathbb{R}^+))\| = 1$ for all $z \in L(W)$ and $\|\theta(z, 0)\| = 0$. Proof. If A has a bounded approximate identity bounded by 1, then we choose x and y in A as in the proof of the previous theorem.
