Human-Computer Interaction (HCI) is a multidisciplinary field of study focusing on the design of computer technology and, in particular, the interaction between humans (the users) and computers. While initially concerned with computers, HCI has since expanded to cover almost all forms of information technology design.
[Human computer interaction - Wikipedia](#)

In human and computer interactions, a semantic gap usually exists between human and computer's understandings towards mutual behaviors. Ontology (information science) , as a formal representation of domain-specific knowledge, can be used to address this problem, through solving the semantic ambiguities between the two parties.
