[Semiconductor - Wikipedia](#)

Semiconductors in their natural state are poor conductors because a current requires the flow of electrons, and semiconductors have their valence bands filled, preventing the entry flow of new electrons.

[What is a Semiconductor | Electronics Notes](#)

Semiconductors and semiconductor technology forms the basis of most of the electronics industry these days.

Transistors, diodes, integrated circuits and many more devices all have semiconductor technology in common.

[Conductors Insulators Semiconductors - Fundamentals ...](#)

Semiconductors are solids whose conductivity lies between the conductivity of conductors and insulators.

Due to exchange of electrons - to achieve the noble gas configuration - semiconductors arrange as lattice structure. Unlike metals, the conductivity increases with increasing temperature.
