This newer class of high blood pressure medication works
by decreasing chemicals that tighten blood vessels. This
medication may be used alone or in combination with
another medication. Side effects may include: Cough;
Diarrhea or stomach pain; Heartburn; Rash; If High Blood
Pressure Drug Side Effects Bother You. Partner with your
doctor.

[high blood pressure medications - American Heart Association](#)

These drugs block the effects of angiotensin, a chemical
that causes the arteries to become narrow. Angiotensin
needs a receptor- like a chemical "slot" to fit into or bind
with- in order to constrict the blood vessel. ARBs block
the receptors so the angiotensin fails to constrict the blood
vessel.

[How to Treat Hypertension | Everyday Health](#)
