This introduction to the recent theory of abstract tubes describes the framework for establishing improved inclusion-exclusion identities and Bonferroni inequalities, which are provably at least as sharp as their classical counterparts while involving fewer terms. All necessary definitions from graph theory, lattice theory and topology are provided.

By applying a recent result of Nairman and Wynn on

abstract tubes, we establish a new improvement of the classical Bonferroni inequalities for any finite collection of sets $\{A_v\}_{v \in V}$ associated with an additional structure, which is assumed to be given by a union-closed set X of non-empty subsets of V such that $x \in X \Rightarrow A_x \subseteq \bigcup_{v \in x} A_v$ for any $x \in X$.
