We call Embedded Knowledge-Based Systems (EKBSs) the resulting control systems. Autonomous robots are typical agents considered here, but pure software agents are of interest, too. At least some of the respective knowledge must be symbolic in order to be inspectable and communicable. Regarding environment sensing, the focus is on 3D sensor data, such as point clouds, and on methods and algorithms for efficient handling and semantic interpretation.

#### Knowledge-based systems - Wikipedia

A knowledge based system has three types of sub-systems: a knowledge base, a user interface and an inference engine. The knowledge base represents facts about the world, often in some form of subsumption ontology. The inference engine represents logical assertions and conditions about the world, usually represented via IF-THEN rules.
