Neuroscience - Wikipedia

Neuroscience (or neurobiology) is the scientific study of the nervous system. It is a multidisciplinary branch of biology, that combines physiology, anatomy, molecular biology, developmental biology, cytology, mathematical modeling and psychology to understand the fundamental and emergent properties of neurons and neural circuits.

Journal of Neuroscience

This image shows the mouse adult hippocampus with neurogenesis markers. EYFP (green) is expressed in radial glia-like neural stem cells and their progenies.

Neuroscience | University of Pittsburgh

The University of Pittsburgh is among the nation's most distinguished comprehensive universities, with a wide variety of high-quality programs in both the arts and sciences and professional fields.

AXON Neuroscience SE is a biotech company dedicated to the development of disease modifying immunotherapy and early diagnostics for Alzheimer's disease.

Affect-Neuroscience.org Affect-Neuroscience.org

Understanding the Mechanisms behind Human Psychopathology. Anxiety, depression and related affective disorders are the most prevalent mental health disorders worldwide, but the underlying mechanisms of emotions are also the least understood by modern science. Affective neuroscience is the study of the brain mechanisms underlying emotional behavior.

Daniel Reisel: The neuroscience of restorative justice ...

Daniel Reisel studies the brains of criminal psychopaths (and mice). And he asks a big question: Instead of warehousing these criminals, shouldn't we be using what we know about the brain to help them rehabilitate? Put another way: If the brain can grow new neural pathways after an injury could we help the brain re-grow morality?
