Rational homotopy theory revealed an unexpected dichotomy among finite CW complexes: either the rational homotopy groups are zero in sufficiently high degrees, or they grow exponentially. Namely, let X be a simply connected space such that H *(X , Q) is a finite-dimensional Q -vector space (for example, a finite CW complex has this property).

In rational homotopy theory one simpli es these invariants. Instead of considering Hn(X) and pn(X), we consider the ra-tional homology groups Hn(X;Q) and the rational homotopy groups pn(X) Q. In fact, these groups are Q-vector spaces, and hence contain no torsion information. This disadvantage of losing some information is compensated by the fact that it is easier to calculate these

Rational Homotopy Theory A Brief Introduction MSCS UIC

A simply connected space X is of nite rational type if con-dition (1) of Proposition 1.8 is satis ed. We can now nally specify clearly the subject presented in these notes. Rational homotopy theory is the study of rational ho-motopy types of spaces and of the properties of spaces and maps that are invariant under rational homotopy equivalence.

as well as by the list of open problems in the final section of this monograph. The computational power of rational homotopy theory is due to the discovery by Quillen [135] and by Sullivan [144] of an explicit algebraic formulation.

This way rational homotopy theory connects homotopy theory and differential graded algebra. Akin to the Dold-Kan correspondence, the Sullivan construction in rational homotopy theory connects the conceptually powerful perspective of homotopy theory with the computationally powerful perspective of differential graded algebra.

As the authors explain eloquently, the (computational) power of rational homotopy theory comes from its algebraic formulation, which was first discussed by Sullivan and the mathematician Daniel Quillen, and involves the use of graded objects with both an algebraic structure and a "differential". What is fascinating about the role of the differential is its connection with homotopy theory, and
