The chemistry of diphosphines and polyphosphines centers on the facile cleavage of the P-P bond (by alkali metals, organometallic reagents), affording phosphide anions. From these, phosphines may be obtained by the methods outlined in Section 1.12.2.4.4. The P-P bond has remarkable thermal stability and many compounds based on this bond type are known.

Chemical warfare agents constitute one of the greatest threats in the modern world. Among them, the neurotoxic agents are of special interest due to their high lethality and danger. Neurotoxic agents are organophosphorus compounds that act by inhibiting the enzyme acetylcholinesterase, which is
