Metaplectic group - Wikipedia

The fundamental group of the symplectic Lie group $Sp(2n, \mathbb{R})$ is infinite cyclic, so it has a unique connected double

cover, which is denoted $Mp(2n, \mathbb{R})$ and called the metaplectic group. The metaplectic group $Mp(2, \mathbb{R})$ is not a matrix group: it has no faithful finite-dimensional representations. Therefore, the question of its explicit realization is nontrivial. It has faithful irreducible infinite-dimensional representations, such as the Weil representation described below.
